

## **Assembly and Installation Guide**

# **Round Starter Kit**

## Description

The Round Starter Kit is a compact all-in-one wicking system.

Each reservoir holds 12 lt of water.

The Round Starter Kit can be used as an insert to convert any planter larger than Ø 50cm in diameter into a self-watering wicking pot.

It can also be used as a standalone grow pot.

## Specifications

Material: Recycled Polypropylene

Country of manufacture: Wicking Components, Australia. Exterior Grow Pot, New Zealand.

External dimensions: Ø495mm at the widest point, grow pot is a height of 390mm. Overall height 450mm with inlet pipe installed.

Colour: Black

Weight: 2.2 kilograms

Water reservoir capacity: 12 litres

## Contents

1 x Reservoir Pot

1 x Round Wicking Cell

1 x Inlet Pipe

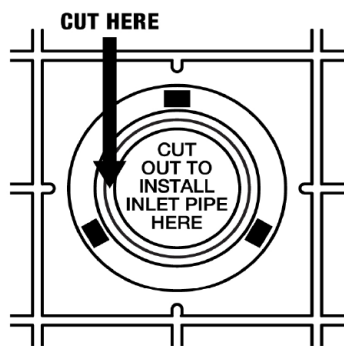

1x Overflow Pipe

3x Joiners

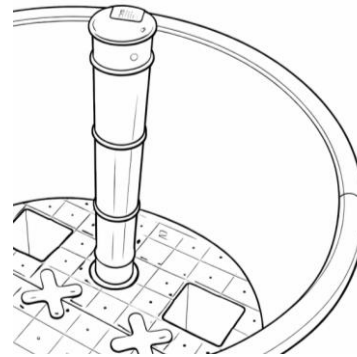

1x 2 litre bag of perlite

## Assembling the Wicking Starter Kit

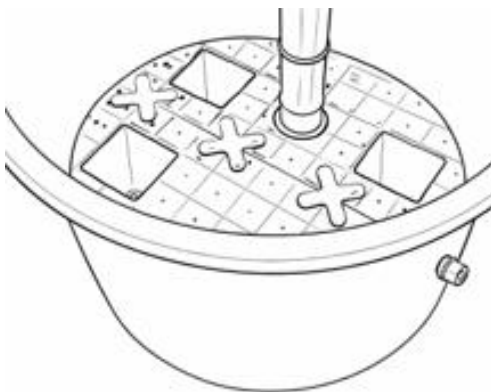

To fit the WaterUps Inlet Pipe you must cut a hole out of the top of the WaterUps cell. Using a sharp knife cut along the circular groove around the top of the WaterUps cell as shown.

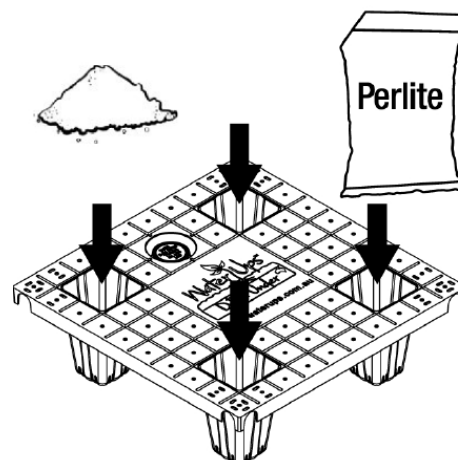

The three tabs at the base of the Inlet Pipe lock into the three holes in the top of the WaterUps cell. Apply some pressure to the Inlet Pipe as it is inserted until it clicks into the cell.

Ensure the overflow is slid through the side wall hole of the reservoir pot, screw the washer and nut over the thread on the outside of the pot. Clip the joiners in place to connect the tiles.

Fill each foot of the cell with perlite. Evenly distribute until the contents of the bag are empty.

## **Filling the reservoir and planting.**

Water in plants as normal and fill the reservoir with 12lt of water. The reservoir will initially empty over only a few days as the soil reaches field capacity (the maximum amount of water that soil can hold). Refill the reservoir again after three(3) days. Monitor and refill as needed. Watering intervals will be determined by the plant size, soil type and climatic conditions.
